

Sony HX99 Compact Camera with 24-720 mm zoom

Despite its super-compact size, the HX99 delivers high-quality images and outstanding performance, incorporating high-level functions like 24–720 mm zoom, 4K video recording, fast and precise AF, plus a high-contrast OLED electronic viewfinder, handy control ring and tiltable LCD touchscreen for easy operation.

Key Features The world's smallest camera with 24–720 mm zoom, the HX99 goes wherever the action is. With its ZEISS Vario-Sonnar T 24–720 mm lens and high-level features like Fast Intelligent AF and responsive Eye AF, it delivers remarkable performance in any setting. Despite its compact size, the camera offers a broad zoom range from wide-end 24 mm to 720 mm telephoto. Clear Image Zoom allows the subject to be magnified while effectively preserving high resolution, up to 1440mm. The HX99's sophisticated algorithms and high-performance gyro-sensor work together to compensate for camera shake, providing reduction in shake even with hand-held shooting at high zoom magnifications. Zoom Assist enables fast, easy framing of moving subjects at telephoto range. Advanced imaging technology provides superior image quality in both videos and still shots. Advanced image-processing technology delivers high-resolution images with low noise back-illuminated Exmor R CMOS sensor, with 18.2-megapixel effective resolution, and the advanced BIONZ X 4K videos (QFHD: 3840 x 2160) recorded with full pixel readout and no pixel binning. Speedy AF, combined with 10fps (max.) 7 continuous shooting, helps you keep up with fast-moving subjects,

making it easier to capture those decisive action shots
The camera's rotating LCD screen helps you check the composition of self-portrait shots before you shoot
Touch Focus lets you set the focus simply by touching the monitor, while the Touch Pad function shifts the focus smoothly when you slide a finger across the LCD screen
