

Fujifilm X-T30

Digital Camera

Body Only -

Black

Pairing impressive imaging capabilities with an especially compact design, the black FUJIFILM X-T30 is a versatile mirrorless camera distinguished by advanced stills and video recording along with sleek and intuitive handling characteristics. Key Features

26.1MP APS-C X-Trans BSI CMOS 4 Sensor and X-Processor 4 Sharing a sensor with the professional-oriented X-T3, the X-T30 features an APS-C-format 26.1MP X-Trans CMOS 4 sensor, which has a back-illuminated design to afford smooth tonal rendering. Versus conventional pixel patterns, the X-Trans design more closely mimics the organic nature of film in order to produce nuanced colors and tonal transitions, while also reducing moiré and aliasing.

UHD and DCI 4K Video Recording More than a stills camera, the X-T30 offers an enticing array of video capabilities, including internal UHD 4K30 video recording at up to 200 Mb/s and simultaneous external and internal recording is possible. DCI 4K30 and Full HD 1080p120 recording is also possible, and video files can be saved using either MPEG-4 AVC/H.264 or HEVC/H.265 compressions, and 4K.

Body Design A bright and clear means for eye-level viewing, a 2.36m-dot OLED electronic viewfinder offers a 0.62x magnification with a fast refresh rate, wide viewing angle, and adjustable diopter settings. The viewfinder remains blackout free while shooting up to the top 30 fps shooting rate, and a unique Sports Finder Mode can also be employed, which highlights a 16.6MP crop area of the sensor in order to allow you to see outside of the image frame.

Film Simulation and Grain Effect Modes Taking advantage of FUJIFILM's vast history in traditional film-based photography, the X-T30

integrates several Film Simulation modes. These modes mimic the look and feel of some of FUJIFILM's classic film types, including Eterna, which copies the look of cinematic film with understated colors and richer shadow tones; XF 18-55mm f/2.8-4 R LM OIS Lens Bundled with the camera body is a versatile zoom that covers many different scenarios. The XF 18-55mm f/2.8-4 R LM OIS lens features a 27-84mm equivalent focal length that covers wide angle to telephoto perspectives with ease. The f/2.8-4 maximum aperture range ensures both speed and compactness in terms of design and it features three aspherical and one extra low dispersion element for combating aberrations.
