

# Panasonic DC- GF10KGA Lumix G Single Lens Mirrorless Camera - Orange

Perfect for taking selfies even on Night Mode, the Panasonic DC-GF10KGA is ready to capture everything with stunning colour and clarity. Key Features Night Mode Selfie - The camera first takes a picture of the background without the flash - then a picture of your with the flash. It combines both shots into a single perfect nighttime selfie. Background Control - The 'Defocus' function softens the area around the face while the Clear 'function' captures both the subject and background clearly. Panorama Selfie - Selfies can also be shot in panorama pictures, which is ideal for group photos and shots in front of a dynamically scenic background. 4K Photo Selfie - Catch the best moment at 30 frames per second and save it as an 8-megapixel- equivalent image. Different from conventional 4K shooting, the 4K Burst (Wide- angle) mode\* lets you leverage the lens' angle of view. Beauty Modes - Want to add some breathtaking beauty to your selfies? Use the Soft Skin mode for smoother skin, and Slimming for a filter, trimmer look. These features can be used in both Self Shot mode and Potrait mode. 22 Filter Effects .
