

# DJI Mavic 2 PRO with Smart Controller Drone - Grey

The Pro with Smart Controller from DJI is a drone that balances power, portability, and professional-quality visuals with the inclusion of a 20MP Hasselblad L1D-20c gimbal camera. The camera delivers a 1" CMOS sensor with an adjustable f/2.8 to f/11 aperture, support for a 10-bit Dlog-M color profile, and 4K 10-bit HDR video capture. Key Features Hasselblad L1D-20c Gimbal Camera The Hasselblad camera also supports the 10-bit Dlog-M color profile and 4K 10-bit HDR video capture. Dlog-M provides over 1 billion colors and high dynamic range photos. Your 4K HDR video can be immediately played back with correct color tones when the Mavic 2 Pro is attached to a 4K TV with HLG. Hyperlapse Time-Lapse Shots With a single tap you can use your Mavic 2 Pro to capture stunning time-lapse shots in Hyperlapse mode, processing everything automatically and saving you time in post-processing. You can even simultaneously save photos in JPEG and RAW on a microSD card (not included). Hyperlapse shots can be captured with four distinct modes: Free: Move the Mavic 2 where you want with total freedom. Circle: Select a subject for the Mavic 2 to automatically circle around. CourseLock: This flies the Mavic 2 on a locked course in a straight line, forward and backwards or right to left, allowing you to adjust the gimbal along the way for dramatic results. WayPoint: Set a specific, savable flight path in 3D space for a single time-lapse, or for multiple shots at different times to edit together later. Smart Controller The DJI Smart Controller offers these and many other features. It connects to your

drone as soon as you turn it on, so you can start flying right away. Its robust construction lets you fly in extreme conditions, supporting temperatures ranging from -4 to 104°F. And with a built-in 5000mAh battery, you can do all of this for up to 2.5 hours per charge. Enhanced HDR Photos With 14 EV, the Mavic 2 Pro is designed to capture clear, ghost-free images by blending together a sequence of individual photos taken at varying exposures. HyperLight Noise Reduction With HyperLight mode switched on, the Mavic 2 Pro can capture low-light images with reduced noise. H.265/HEVC Support By utilizing the H.265/HEVC codec in your 4K videos, you can benefit from advanced compression that includes 50% more information than H.264/AVC, resulting in higher-quality results and videos with more detail. Aerial Shooting Modes Point of interest (POI) 2.0: Thanks to vision and GPS distance measurement technologies, you can circle around and shoot a specific subject. Waypoint 2.0: By tapping the desired waypoints and point of interest in the app, you can plan a flight path quickly and save it for your next flight. Boomerang: Centering on a subject, the Mavic 2 will fly around it in an elliptical pattern until reaching its starting location. \*image are for illustration purposes only

## Features

<b>Brand</b>	DJI
<b>Model</b>	DJI DRONE MAVIC 2 PRO W/CONTRO
<b>Product Type</b>	Controller
