

Fujifilm EF-X500 Shoe Mount Flash - Black

The EF-X500 is a hot-shoe mount flash with the maximum guide number of approx. 50 (ISO100m) / 164 (ISO100ft). Its support for the FP mode (high-speed flash sync) means the flash can be fired at any shutter speed. Key Features FP flash (high-speed flash sync) freeing photographers from worrying about shutter speed With cameras equipped with a focal plane shutter, when the shutter speed is high, the first and second shutter curtains move across at the same time, making the exposure through a narrow vertical slit between them. Because of this, light from a conventional flash can only reach a small section of the sensor. When shooting with a near-maximum aperture to create beautiful bokeh, the shutter speed tends to go higher. Wireless multi-flash TTL freely controlling light on subject and background to enable creative photography EF-X500 can be used in multi-flash setup to freely control light on a subject and background for a creative result. TTL lighting control is available with single flash and also in the multi-flash setup, so that you can start shooting without having to make cumbersome adjustments to light output. Dust-resistant and water-resistant capabilities expanding the scope of photographic fields when used with X Series cameras Innovative design with low center of gravity creating a perfect harmony with the lightweight and compact X Series cameras The front side of EF-X500's main body is applied with leather texture to compliment the design of the X Series cameras. It is designed with low center of gravity to maintain ease of operation when mounted on the X Series cameras, known for their lightweight

and compact bodies. *image are for illustration purposes only

Features

Dimensions

Brand	Fujifilm
Model	EF-X500
Product Type	Mount Flash
Weight (kg)	0.38
Product Height (cm)	12.14cm
Product Width (cm)	6.72cm
Product Depth (cm)	10.73cm
