

Nikon AF-P DX Nikkor 70- 300mm f/4.5- 6.3G VR Camera Lens - Black

Go the distance with the AF-P DX NIKKOR 70-300mm f/4.5-6.3G ED VR the new 4.3x telephoto zoom lens with a flexible f/4.5-6.3 maximum aperture. Featuring a stepping motor for the autofocus drive, you'll be able to get up close to your subjects, quicker and quieter. To reduce the effects of camera shake, a Vibration Reduction system is built in to stabilise any situation by providing an effect equivalent to a shutter speed of 4.0 stops faster. An Extra-low Dispersion glass element is also incorporated to provide outstanding shooting possibilities that advance your creative vision. Key Features **FASTER AND STEALTHIER** Shoot fast-moving subjects at different distances with smooth and consistent results. With the all-new stepping motor in the AF-P DX NIKKOR 70-300mm f/4.5-6.3G ED VR, you can achieve fast and precise autofocus (AF) through improved phase-detection and contrast-detection AF speeds. At the same time, AF drive sound has been reduced, enabling photographers and videographers to capture subjects in their most natural moments without drawing unnecessary attention. **GO THE DISTANCE** With a practical zoom range of 70-300mm, the AF-P DX NIKKOR 70-300mm f/4.5-6.3G ED VR is versatile enough to cover landscapes, portraits and more, while its telephoto capability achieves dramatic close-ups by bringing the subject closer to you. In addition, the Extra-low Dispersion (ED)

glass element within its construction effectively minimises chromatic aberrations such as colour fringes for stunning images. **SHOOT WITH CONFIDENCE** Take steadier shots with the Vibration Reduction (VR) feature on the AF-P DX NIKKOR 70-300mm f/4.5-6.3G ED VR. Compensating for slow, wide panning movements, the VR feature provides an effect equivalent to a shutter speed 4.0 stops faster so that you can achieve crisp and sharp images even for handheld shots. **STAY FOCUSED** An all-new setting system enables you to use the camera menus to change lens settings, freeing you to stay focused on composition and framing. The focus mode (AF/MF) can be selected using the camera's menu. This eliminates accidental setting change caused by unintentional switch operation to give you a seamless, precise shooting experience. **TAKE IT EVERYWHERE** A small, compact and lightweight body makes it the handy choice for travel, a day out with the family, on a safari, and everything else in between. Experience a world of portability, no matter where your passion leads. At just 72 × 125 mm and weighing approximately 415g, the AF-P DX NIKKOR 70-300mm f/4.5-6.3G ED VR is the perfect companion for your adventures. Angle of view is equivalent to that of a 105-450 mm lens in FX/35mm format. When attached to a DX-format digital SLR camera, with zoom set at the maximum telephoto position. As AF-P lenses incorporate a stepping motor, the number of compatible cameras is limited. For compatible cameras, a firmware update may be required. *image are for illustration purposes only

Features

General

Brand	Nikon
Model	AF-P DX 70-300/4.5-6.3G VR
Product Type	Camera Lenses

Camera Lenses

Aperture	f/4.5, to6.3
