

# Jabra Elite Active 7 True Wireless Earbud - Navy

When you're working up a sweat, you want to know your buds are going to stay firmly in place. We've re-engineered our sports earbuds for the ultimate active fit with our unique ShakeGrip technology, designed to stay in. No matter how hard you work out. Key Features Shakegrip Secure Fit Whether you're walking, running or repping, Elite 7 Active stay comfortably in place, thanks to our unique ShakeGrip™ technology. Made with a special Liquid Silicone Rubber compound that holds the buds more securely in the ear without the need for ear wings, ShakeGrip is an ingenious material that feels incredibly soft despite its firm grip. Perfect for long periods of active use. Active Noise-Cancellation Nothing should intrude when you're in the zone. That's why powerful Active Noise Cancellation (ANC) kicks in with a simple tap of the button. Distracting background noise is blocked instantly, with adjustable levels of cancellation that can be set to your own preference using the Jabra Sound+ app. The discreet design fits firmly and snugly in the ear, forming a tight but comfortable seal and giving you even better noise isolation. So you can stay immersed in sound no matter where your exercise takes you. Design You still want comfort, even when pushing yourself. So, while Elite 7 Active buds are big on tech, they're small in size, for our most comfortable fit yet. Lightweight at just 5.5g each and 16% smaller than our previous smallest earbuds, they're barely noticeable once in-ear. They also feature a re-engineered EarGel™ design, delivering a more tapered, rounded fit that molds to the shape of your ear, so there's nothing distracting you from your workout. Clear Calls When it comes to taking calls, Elite 7 Active

offers amazing clarity. Four carefully placed microphones, covered with a fine SAATI Acoustex® mesh for wind protection, deliver outstanding call clarity, whether you're working out or working on that big deadline. Re-Engineered Battery Life Elite 7 Active features a new battery, and thanks to our advanced efficiency technology, it delivers up to 8 hours of playback. Keep them in the case and they're good for up to 30 hours. And if you do find yourself caught short, a speedy 5-minute fast charge gives you up to an hour of power. Mono Mode Mono mode lets your buds work independently. Take one out, and high-quality, true wireless sound flows freely through one ear, while keeping the other free to listen out. You can even charge the one you're not using to make your battery go even further. Durability With their attractive design, you'd be forgiven for thinking that Elite 7 Active are all about the looks. But these mighty buds are also made of some pretty tough stuff. Perfect for outdoors, these buds are waterproof, sweatproof, and workout-proof (IP57-rated). \*image are for illustration purposes only
